

EXECUTIVE SUMMARY

Systems Architect and Staff Software Engineer with over 10 years of experience in data engineering, distributed microservices, fault-tolerant computing, and event-driven architectures (EDA). Specialist in eliminating critical latencies in high-throughput transactional environments under strict ACID compliance.

CORE ARCHITECTURAL EXPERIENCE IN PRODUCTION

[01] Consórcio Magalu - Senior Software Engineer / Architect

- 05/2024 - Present | São Paulo, Brazil
- * Business ROI: Zero production locks and complete mitigation of downtime risks during fiscal reconciliations.
- * Engineering Feat: Partitioned asynchronous purge of 11TB legacy transaction logs on SQL Server without lock escalations.
- * Solution: Decoupled chunked batches governed by dynamic windows and log buffer pressure monitoring.
- * Stack: C#, .NET Core, SQL Server, Sybase, Kafka, Docker, Kubernetes

[02] Grupo GPS - Senior Software Engineer

- 06/2023 - 05/2024 | São Paulo, Brazil
- * Business ROI: 99.8% reduction in accounting batch processing and multi-tenant payroll settlement time.
- * Engineering Feat: Slashed financial computation pipeline latency from 7 days down to 20 minutes with full consistency.
- * Solution: Deep query tuning, clustered table partitioning, and high-concurrency async processing in C#.
- * Stack: C#, T-SQL, SQL Server, Index Optimization, ASP.NET Core

[03] Ambar / Construtech - Specialist Software Engineer

- 07/2021 - 06/2023 | São Carlos, Brazil
- * Business ROI: Real-time synchronization of catalogs and inventories across 5 distribution centers with zero order loss.
- * Engineering Feat: GS1 standard messaging broker bridging enterprise ERP and POS endpoints in real-time.
- * Solution: Transactional Outbox pattern backed by RabbitMQ queues and local idempotent fallback stores.
- * Stack: C#, RabbitMQ, SQL Server, GS1 Architecture, Microservices

[04] Summerhill / Eco Wave - Software Engineer

- 11/2019 - 06/2021 | Toronto, Canada
- * Business ROI: Route optimization and energy field audits lowering operational travel costs by 22%.
- * Engineering Feat: Geographic route optimization engine for field technicians with offline-first synchronization.
- * Solution: Heuristic routing algorithm paired with local SQLite caching and resilient background sync.
- * Stack: Python, TypeScript, Node.js, SQLite, GeoJSON, REST APIs

[05] Military Police of São Paulo State - Systems & Infrastructure Engineer

- 02/2014 - 11/2019 | São Paulo, Brazil
- * Business ROI: 99.99% uptime for mission-critical emergency dispatch and

telecommunications infrastructure.

- * Engineering Feat: High-availability automated failover architecture for emergency 911/190 dispatch centers.

- * Solution: Active-active relational clustering and dynamic SIP/VoIP carrier failover.

- * Stack: Linux Server, Active Directory, Networking, SIP/VoIP, Shell Script, Python

EDUCATION & CERTIFICATIONS

- Postgraduate Degree in Distributed Systems & Software Architecture, FIAP
- Bachelor of Science in Information Technology & Systems, FATEC
